	Model Name	Ensemble Member
1.	ACCESS-CM2	r1i1p1f1
2.	ACCESS-ESM1-5	r1i1p1f1
3.	BCC-CSM2-MR	r1i1p1f1
4.	CAMS-CSM1-0	r1i1p1f1
5.	CanESM5	r1i1p1f1
6.	CESM2	r4i1p1f1
7.	CESM2-WACCM	r1i1p1f1
8.	CNRM-CM6-1-HR	r1i1p1f2
9.	CNRM-CM6-1	r1i1p1f2
10.	EC-Earth3	r1i1p1f1
11.	EC-Earth3-Veg	r1i1p1f1
12.	EC-Earth3-Veg-LR	r1i1p1f1
13.	FGOALS-f3-L	r1i1p1f1
14.	FGOALS-g3	r1i1p1f1
15.	FIO-ESM-2-0	r1i1p1f1
16.	GFDL-ESM4	r1i1p1f1
17.	HadGEM3-GC31-LL	r1i1p1f3
18.	INM-CM4-8	r1i1p1f1
19.	INM-CM5-0	r1i1p1f1
20.	IPSL-CM6A-LR	r1i1p1f1
21.	MIROC6	r1i1p1f1
22.	MIROC-ES2L	r1i1p1f2
23.	MPI-ESM1-2-HR	r1i1p1f1
24.	MPI-ESM1-2-LR	r1i1p1f1
25.	MRI-ESM2-0	r1i1p1f1
26.	NESM3	r1i1p1f1
27.	NorESM2-LM	r1i1p1f1
28.	NorESM2-MM	r1i1p1f1
29.	UKESM1-0-LL	r1i1p1f2

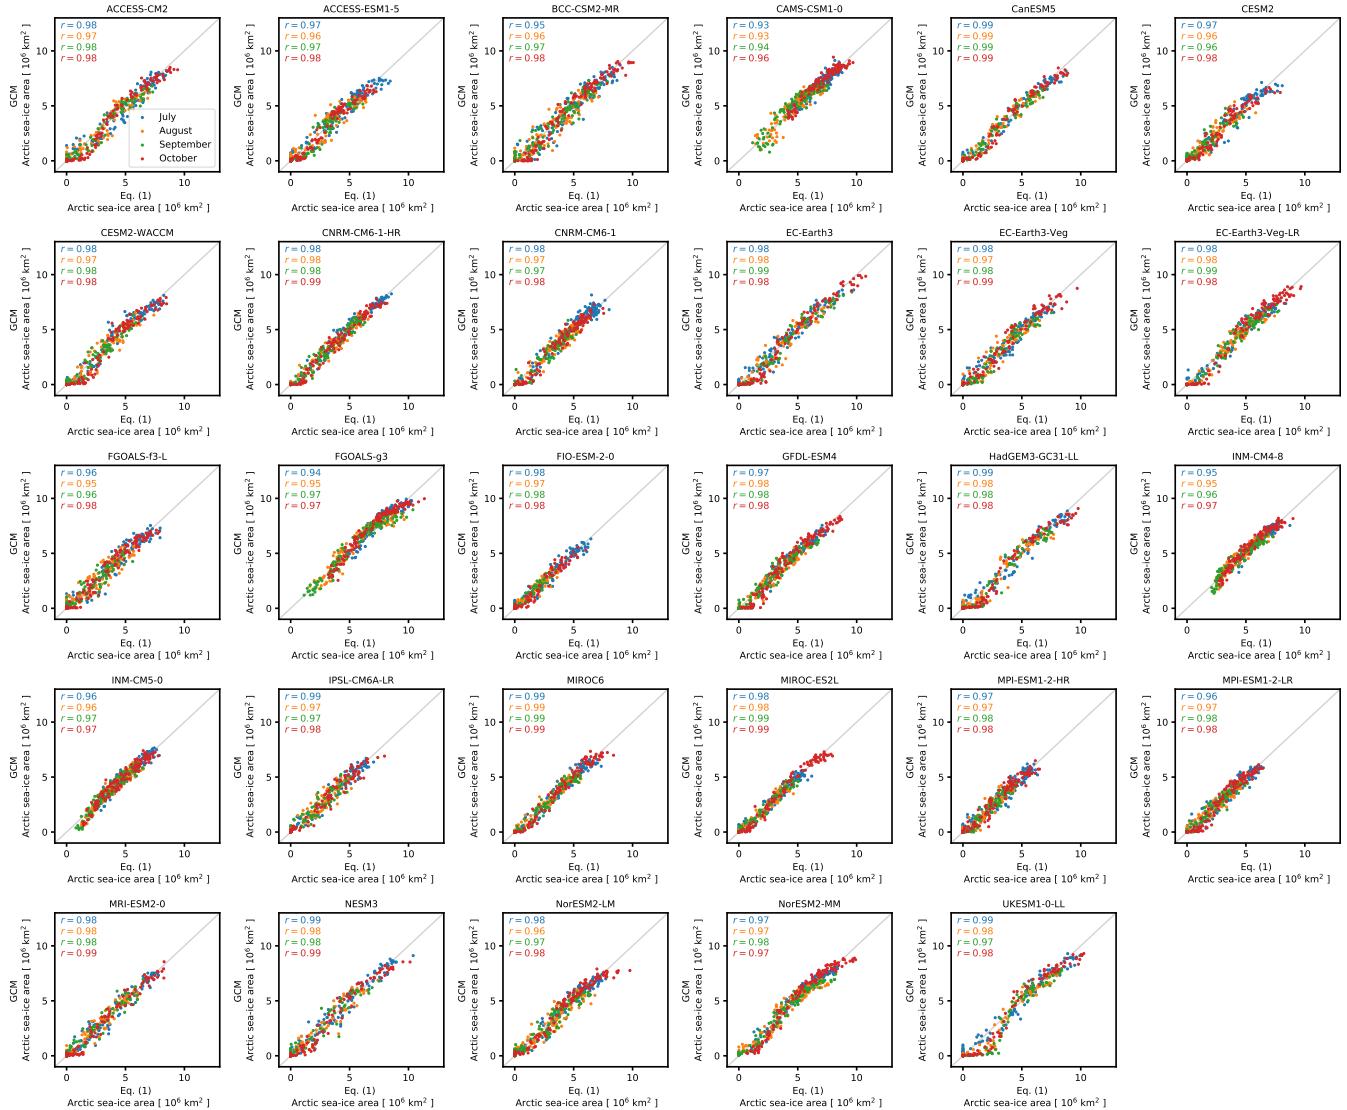

Supplemental Table 1: List of the coupled GCMs and ensemble member used for each Historical, SSP1-2.6, SSP2-4.5, and SSP5-8.5 simulation.

Month	SSP5-8.5	SSP2-4.5	SSP1-2.6
July	15 years	34 years	N/A
August	18 years	21 years	N/A
September	20 years	22 years	30 years
October	18 years	21 years	N/A

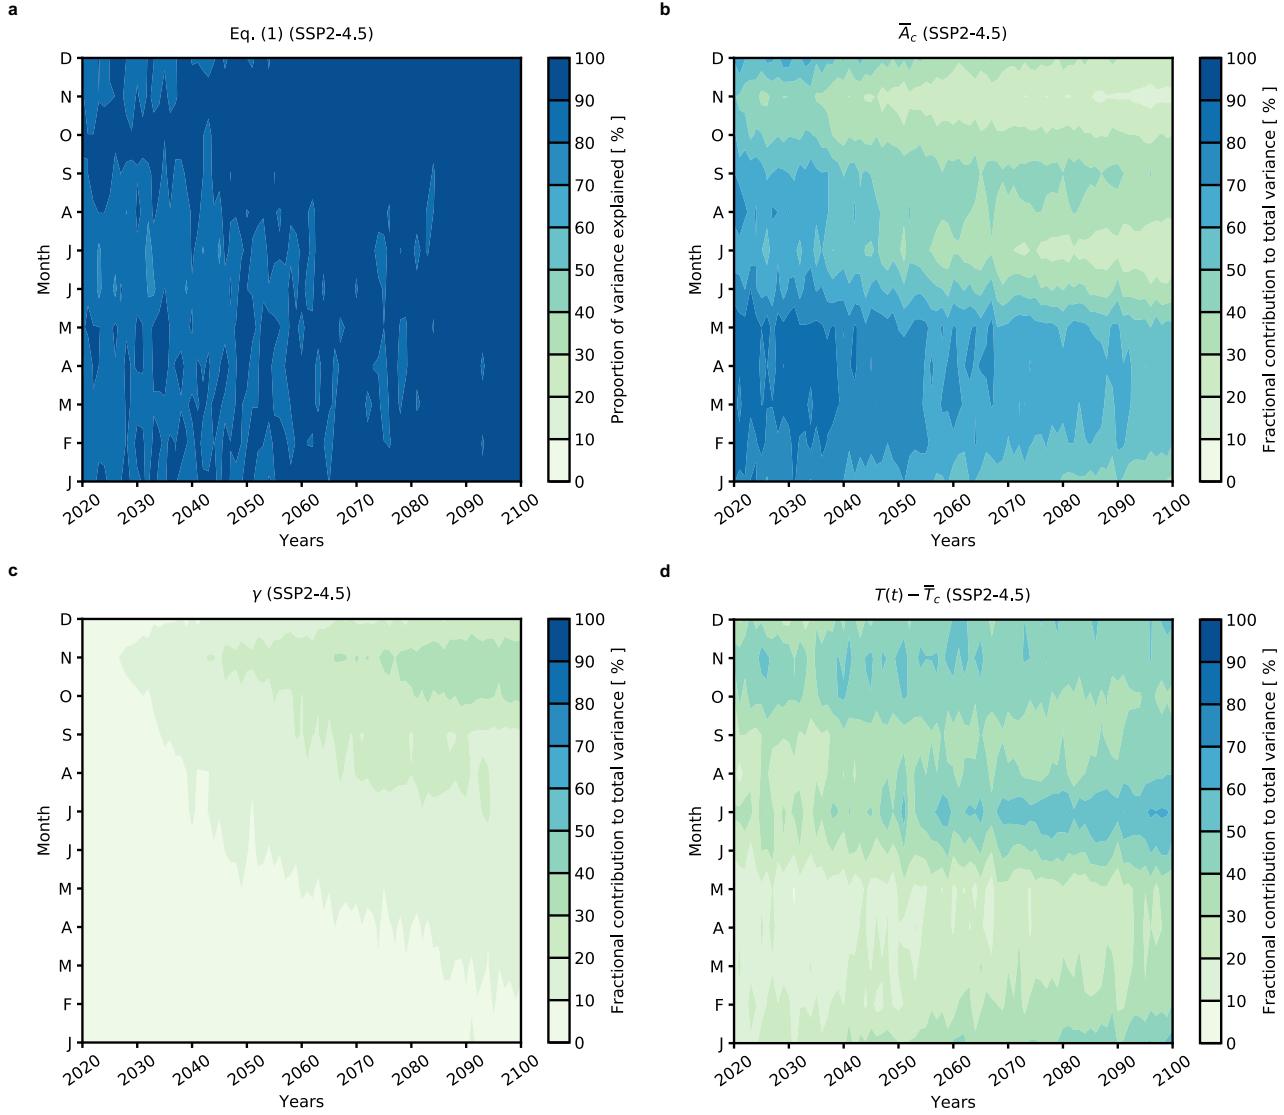

Supplemental Table 2: Internal variability range denoting the range of years when ice-free conditions in the Arctic appear as estimated from the 50-member CanESM5 large ensemble. The range denotes the 3- σ spread (0.14% and 99.86%) for each month and each forcing scenario. For SSP1-2.6, July, August, and October are not included as most ensemble members do not experience ice-free conditions.

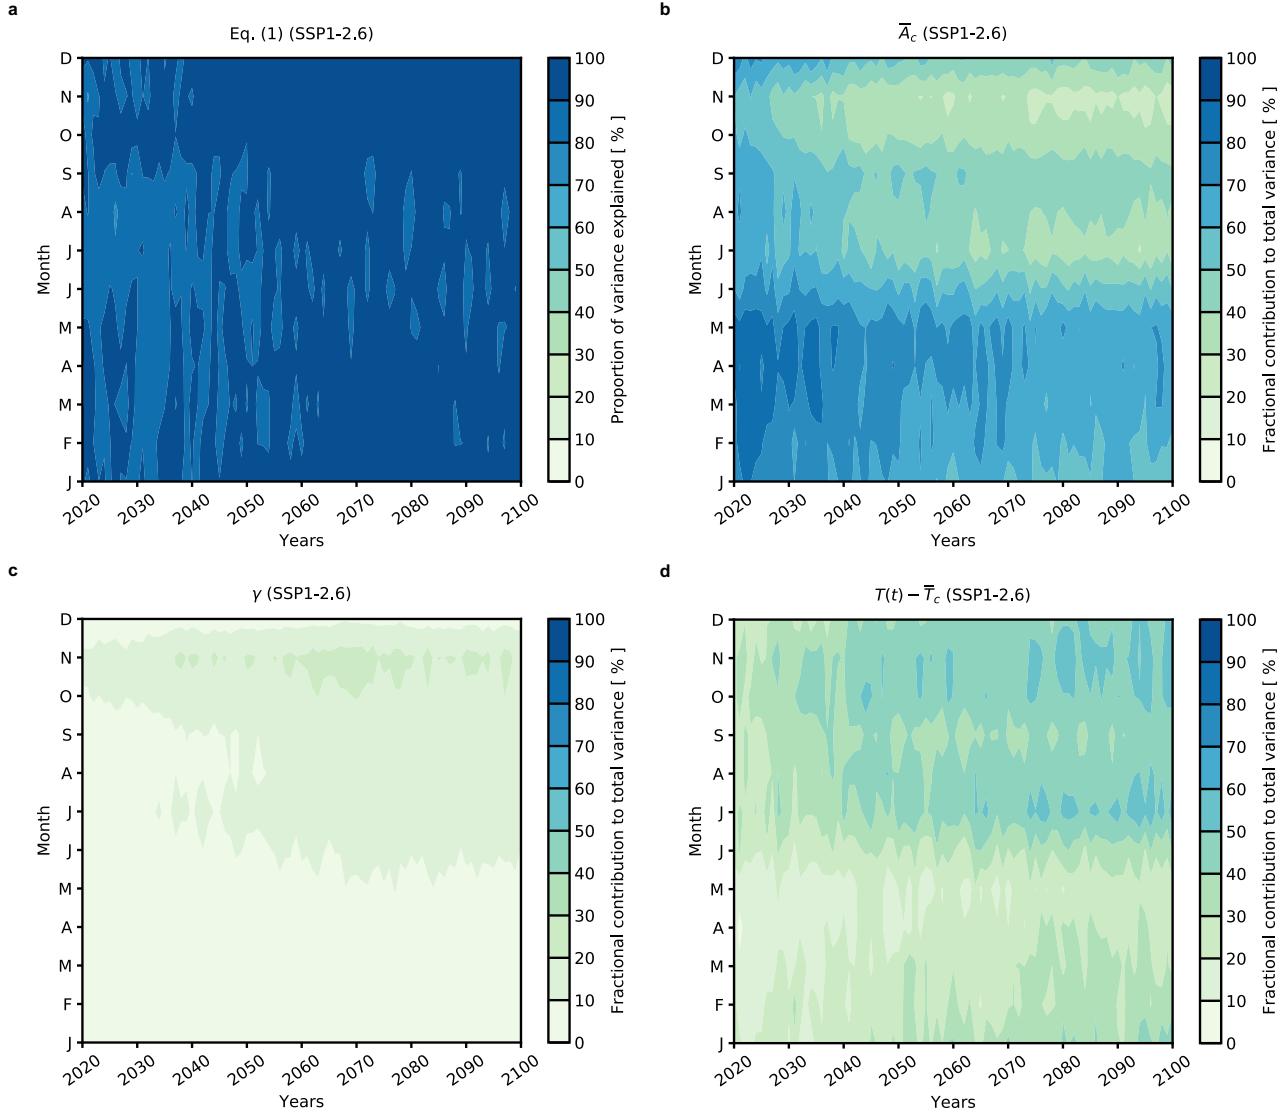

Supplemental Figure 1: **Evolution of the local sea ice sensitivity.** The local sea ice sensitivity for 29 different coupled GCMs computed using total least squares from 1979 up to each year using the month of (a) July, (b) August, (c) September, and (d) October. The black line in each panel denotes the multi-model mean and the grey lines represent individual GCMs. The red dashed line denotes observations from 1979–2020.

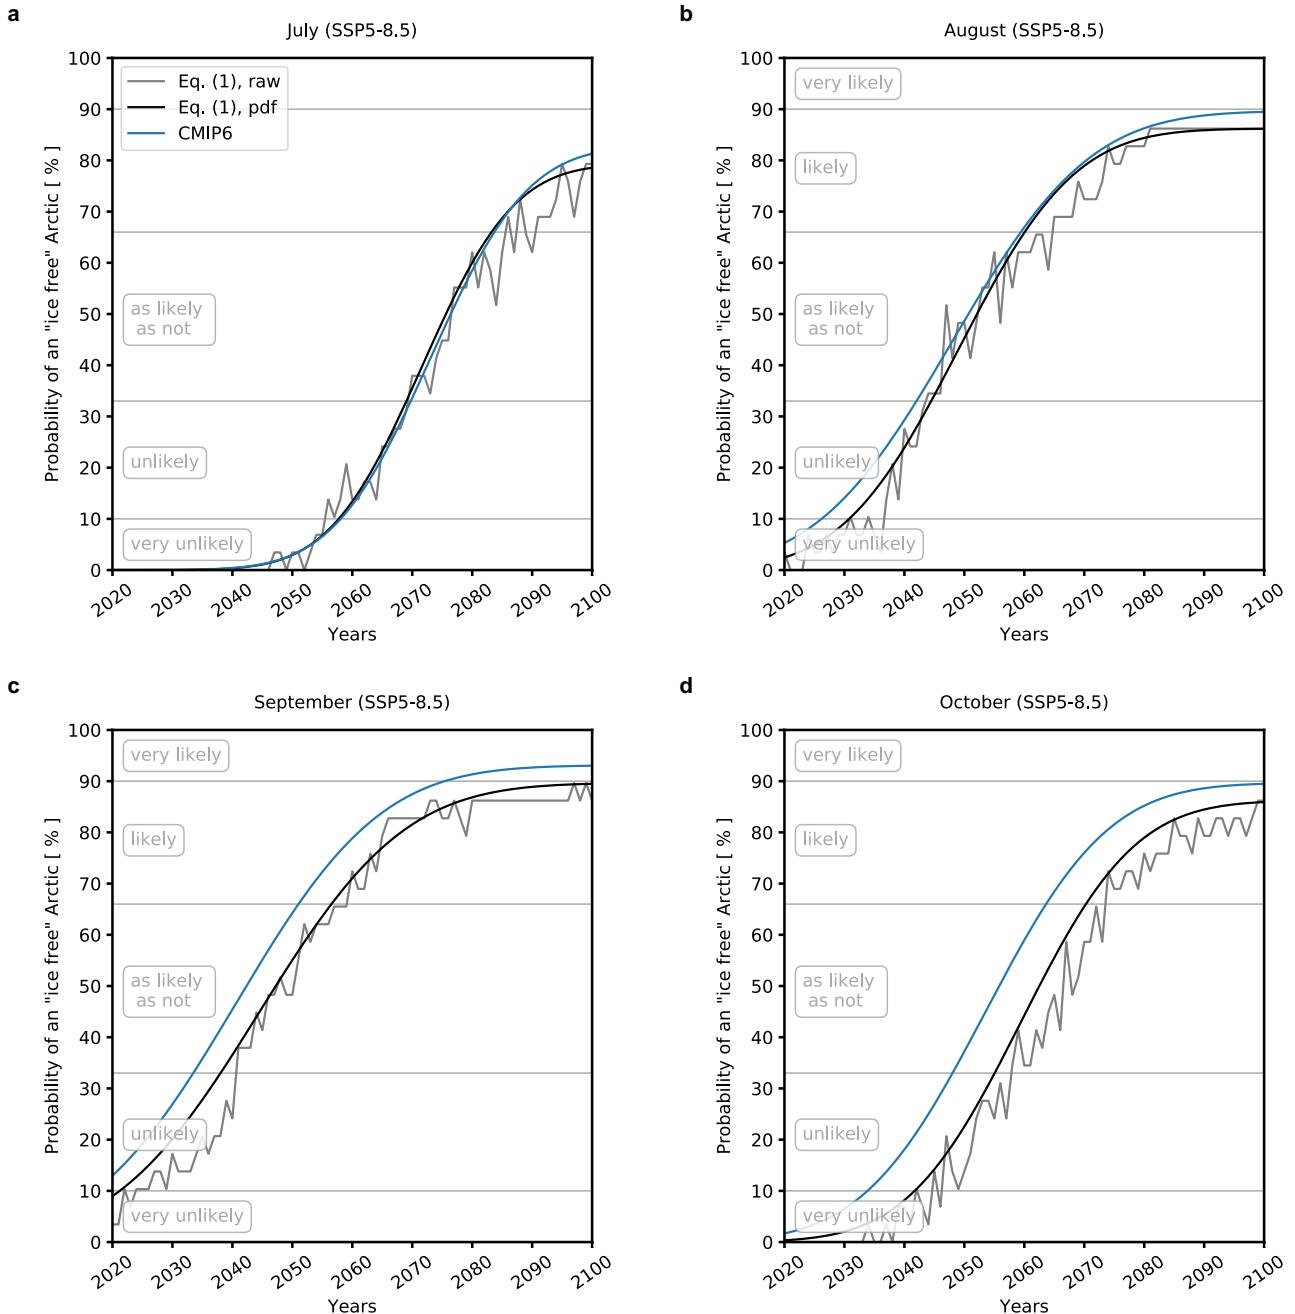

Supplemental Figure 2: **Comparison of Arctic sea-ice area from each GCM and Eq. (1).** Arctic sea-ice area from 29 different coupled GCMs (y-axis) and calculated using Eq. (1) (x-axis) in July (blue), August (orange), September (green), and October (red). All plots use Historical and SSP5-8.5 simulations from 1979–2100.

Supplemental Figure 3: **Partitioning intermodel variance in projections of Arctic sea-ice area in SSP2-4.5.** (a) The proportion of the inter-model variance (r^2 , where r is the Pearson correlation coefficient) in monthly Arctic sea-ice area from CMIP6 models that is accounted for by Eq. (1) as a function of month and year. Fractional contribution of (b) \bar{A}_c , (c) γ , and (d) $T(t) - \bar{T}_c$ to total variance as a function of month and year.

Supplemental Figure 4: **Partitioning intermodel variance in projections of Arctic sea-ice area in SSP1-2.6.** (a) The proportion of the inter-model variance (r^2 , where r is the Pearson correlation coefficient) in monthly Arctic sea-ice area from CMIP6 models that is accounted for by Eq. (1) as a function of month and year. Fractional contribution of (b) \bar{A}_c , (c) γ , and (d) $T(t) - \bar{T}_c$ to total variance as a function of month and year.

Supplemental Figure 5: **Comparison of GCM and Eq. (1) probabilities.** Cumulative probability density function showing the year when the Arctic will experience ice free conditions in (a) July, (b) August, (c) September, and (d) October. The black line represents Eq. (1), which is identical to Fig. 4, and the blue line is the unconstrained CMIP6 output. The grey line shows the cumulative GCM frequencies.
